# Program Description

Medical laboratory scientists are educated to work in clinical chemistry, hematology, immunohematology, immunology, and microbiology with various subspecialties in each of those major areas. Our program of study is designed to provide the knowledge and technical skills necessary to qualify an individual for work in a diagnostic clinical laboratory, in research, or in industry. Students complete two years of pre-professional courses in science and general education and two years of professional medical laboratory science coursework. The professional coursework includes didactic courses, student laboratory instruction, and clinical experience rotations.

## Why Medical Laboratory Science?

Laboratory analysis by medical laboratory scientists plays a critical role, along with that of the physician, in disease diagnosis, treatment, and health maintenance. Medical laboratory scientists are professionals who are prepared not only to produce laboratory data but also to assure the quality of the data, compare and select laboratory methods, advise other healthcare professionals on the validity of data, and supervise laboratory personnel.

If you love the sciences and want an opportunity to help physicians and patients with your knowledge, this major may be ideal for you.
Accreditation

Our B.S. in Medical Laboratory Science program is pursuing NAACLS (National Accrediting Agency for Clinical Laboratory Sciences) accreditation and plans to have this accreditation before graduating our first class of students. Students who complete our program receive a Bachelor of Science in Medical Laboratory Science from the University of New Haven and are qualified to take a certification examination administered by the American Society for Clinical Pathology (ASCP) Board of Certification (BOC).

Curriculum

Students prepare to work in the medical laboratory science field by developing comprehensive knowledge of the biological, physical, and health sciences as they relate to laboratory medicine.

First, students will take a wide range of courses to prepare them to work in the healthcare industry. The School of Health Sciences core curriculum provides students with a broad, interdisciplinary understanding of how prevention, health policy, and person-centered care affect all health professionals.

In their sophomore year, students begin taking biological and physical sciences coursework to prepare for their pre-clinical medical laboratory science classes.

As a junior, students complete a full year of pre-clinical medical laboratory science courses that cover the major areas of medical laboratory work.

Seniors complete a year-long rotational internship in a local area healthcare organization or laboratory where they can practice their laboratory skills under the supervision of a board-certified medical laboratory technician.

FEATURED COURSES

- Microbiology of Medical Lab Science
- Medical Bacteriology
- Immunohematology
- Clinical Chemistry
- Hematology
- Immunology
- Clinical Correlations
- Medical Laboratory Clinical Practicum I & II

Internships and Careers

Students can obtain a wealth of knowledge from books, lectures, and guest speakers, but a more complete knowledge can be acquired by having students enter the workforce and assume responsibilities.

The University of New Haven considers internships to be a critical component of the educational process. We strive to successfully match an intern with the most appropriate work environment. We understand that all three parties in the internship relationship — the University of New Haven, the student, and the internship location — need to devote significant time to make it work. This balancing act, when achieved, results in a quality internship that can lead to developing a strong future employee.

Students in the B.S. in Medical Laboratory Science program are guaranteed to have a clinical internship year placement at a local or regional healthcare organization.

Medical laboratory science will enable you to work in a variety of healthcare settings:

- Hospitals
- Blood banks
- Urgent care centers
- Medical and diagnostic laboratory facilities
- Research organizations

U.S. NEWS & WORLD REPORT:

Medical Laboratory Scientist ranks as the #1 Healthcare Support Job and #21 in the top 100 jobs overall list.
Degree Options

Post-Baccalaureate

The University of New Haven Medical Laboratory Science program offers an option for graduates with a bachelor's degree in the biological, forensic, chemical, or physical sciences to earn a second bachelor's degree in Medical Laboratory Science.

For these B.S. degree graduates who already have their core and science courses, this intensive track allows them to complete the courses in the Medical Laboratory Science curriculum that they are lacking and requires one year of professional medical laboratory science coursework and one year of clinical rotations.

At the program's conclusion, students are eligible to take the national certification exam to qualify as a medical laboratory scientist. Most employers require certification to work as a medical laboratory scientist in a clinical laboratory. With a critical nationwide shortage of certified medical laboratory technologists, market demand has resulted in increased salaries and excellent job placement.

About Us

The University of New Haven, founded on the Yale campus in 1920, is a private, coeducational university situated on the coast of southern New England. It's a diverse and vibrant community of more than 7,000 students with campuses across the country and around the world.

Within our colleges and schools, students immerse themselves in a transformative, career-focused education across the liberal arts and sciences, fine arts, business, healthcare and health sciences, engineering, public safety, and public service. More than 100 academic programs are offered, all grounded in a long-standing commitment to collaborative, interdisciplinary, project-based learning.
